

Paint Masks differ from stencils in that they do not require the addition of "hold-points" to maintain the integrity of an image and text can be done using any style font or design. Paint Masks came about in part as a result of the need for speed, accuracy, repeatability and efficiency in production paint operations. In addition to the many applications for Stencils, Masking applies to specific areas where a desired look cannot be as easily achieved with a stencil. Used in industrial, Military or Commercial applications, masking is often used for shielding in powder coat paint operations and in highly decorative marking. Masking used in Acid or Electro-Chemical Etching, Grit and Sand Blasting can produce fine detail or truly "Permanent" marking of almost unlimited capability. In conjunction with standard "Application Tapes" paint masks can be easily created, cut and applied to any surface for marking. From Company Logos, graphic images, Symbols, Text, even 3D Bar Code. Paint Masks represent an inexpensive and reliable technique for making a permanent marking on almost any surface. BREN has developed a wide range of Masking products now used in almost any application imaginable. From general purpose to specialized Military Applications. SMALL CHARACTER marking, or where HIGH TEMPERATURE marking is needed, no matter what your need, we've got it. And, many of our Masking materials can be cut on any standard "vinyl" cutter. If you have a special sizing or capability need contact BREN for more help.

Vmask™ 3.2 mil(0.0032") matte-finish calendared vinyl with BREN ultra-removable adhesive laminated on a kraft release liner For Stencils Glass etching or Paint Masking where hi-conformability is needed. 45° blade, 90g. min. force.

Often used in the transfer of complex designs or masks from the backing to the surface to be marked, Transfer Tape allows virtually any design or text font to be used without the need for additional "hold-points" use in Stencils.

Transfer Tape Also called Pre-Mask and used to transfer sign/mask designs from backing to surface. Transfer tape is available in self-wound rolls with medium tack acrylic adhesive, in tan (T) paper media or translucent (C)/clear polypropylene media. Specify at time of order.
